

HOT OIL INJECTION

OSI Tool

- Lower cost
- Hot oil where needed
- Less oil volume required
- Less heat loss

Surge Valve - *Closed*

The Surge Valve keeps the hot oil inside the tool by closing the valve, thus saving time, money, and increasing the treatment efficiency.

Traditional Tool

- Higher cost
- Longer injection time
- More volume injected
- More heat loss

The traditional hot oil injection method is inefficient as it becomes time-consuming and costly.
